

LOCK BLOCK™

Introducing the  LOCK BLOCK™. A new safety device designed to ensure positive isolation every time, keeping workers and equipment safe during maintenance and downtime events.

The  LOCK BLOCK™ can be used on all types of equipment from fixed plant and light vehicles, through to heavy earth moving equipment.

ISOLATOR

BATTERY
ISOLATOR

LOCK BLOCK™

With the isolator in the ON position, the eye of the isolator is covered by the  LOCK BLOCK™. This prevents any lock or scissor clip from being installed while the piece of equipment is still energised.

Due to its simple design, the  LOCK BLOCK does not modify current isolation procedures but only improves them. Easy to install and maintenance free, made from a high quality ASA, the  LOCK BLOCK is reliable and will survive the harshest of working conditions.
